Response to Amendment

1. This communication is in response to the amendment filed 7/8/05. Claims 1-29 are presented for examination.
2. The objection under 35 U.S.C. 132 because it introduces new matter is withdrawn by the Examiner.
3. The rejections under 35 U.S.C. 112, first paragraph are withdrawn by the Examiner.
4. The rejections under 35 USC 103(a) are withdrawn by the Examiner based on the changes made by Applicants to the claims.

Allowable Subject Matter

5. Claims 1-29 are allowed. The following is an examiner's statement of reasons for allowance: The primary reasons for the allowance of claims 1-29 is the inclusion of the limitation in the claims, which is not found in the prior art references, of a method for a risk carrier to assume monetary risks from a plurality of risk cedents using a server associated with the risk carrier, the server coupled to a database, said method comprising the steps of:

electronically withdrawing from availability for submission as an offer any of the proposals whose acceptance by the risk carrier would reduce the available risk assumption capacity, as recalculated, below a selected amount.

6. While the closest prior art (Walker et al., U. S. Patent No. 6,119,093) teaches an insurance company server (100, Fig. 1) that transmits policy information relating to a policy or policies to a central server (120, Fig. 1) which makes the policy information available for viewing on a website (130, Fig. 1) to a user via the Internet (100, Fig. 1) through conventional user interface (140, Fig. 1). A user or investors browses the various policies and picks one or

more he is interested in and using conventional interface selects a policy by way of investment order (103, Fig. 1) and further enters credit card number, expiration date and personal information, including his electronic mail ("e-mail") (see: column 4, lines 45-60, Fig. 3c and column 14, lines 19-26). The user or investor then directs his investment order to the insurance syndication service central server (120, Fig. 1) via the Internet (see: column 5, lines 3-8). The syndication central server transmits to the insurance company server updated syndication and transaction information (108, Fig. 1) (see: column 5, lines 44-47). ("CNA Life RE Pilots Online System for Direct Writers and Reinsurers" by Bestwire (hereinafter "Bestwire") teaches a an online system that enables life insurance direct writers (insurers) to shop for reinsurance (see: paragraph 1) through AgoraRe.com. Direct writers post applications and case-specific documents to the site for retrieval and examination by one or multiple reinsurers (see: paragraph 3). Walker et al. and CNA Life RE Pilots Online System for Direct Writers and Reinsurers" by Bestwire fail to teach a method for a risk carrier to assume monetary risks from a plurality of risk cedents using a server associated with the risk carrier, the server coupled to a database, said method comprising the steps of:

electronically withdrawing from availability for submission as an offer any of the proposals whose acceptance by the risk carrier would reduce the available risk assumption capacity, as recalculated, below a selected amount.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

In related art (WO 02/065248) Selesny et al. teaches an insurance product and insurance method for providing financial assurance, against the occurrence of at least one specific event.

In related art reinsurance goes virtual at General Life) MacSweeney discloses an online submission and tracking system for insurance writers and their reinsurers.

The prior art made of record and not-relied upon is considered pertinent to Applicant's disclosure as background material and is not of particular significance. These prior art patents fail to teach or fairly suggest a method for a risk carrier to assume monetary risks from a plurality of risk cedents using a server associated with the risk carrier, the server coupled to a database, said method comprising the steps of:

electronically withdrawing from availability for submission as an offer any of the proposals whose acceptance by the risk carrier would reduce the available risk assumption capacity, as recalculated, below a selected amount.
